

Electromagnetic Flow Meters

ModMAG® M4000

DESCRIPTION

The innovative design of the Badger Meter® ModMAG® M4000 meter represents the next generation of electromagnetic flow meter technology. Incorporating the latest developments in micro processing signal conditioning, the advanced design of the M4000 meter allows an accuracy of $\pm\,0.20\%$ with a flow range of 300:1. Targeted to a variety of oil and gas, industrial and municipal applications, the M4000 meter is virtually unaffected by density, temperature, pressure, and viscosity changes and provides an accurate and reliable long term metering solution. This meter complies with ANSI/NSF Standard 61, Annex G.

OPERATION

The operating principle of the electromagnetic flow meter is based on Faraday's law of magnetic induction: The voltage induced across any conductor, as it moves at right angles through a magnetic field, is proportional to the velocity of that conductor. The voltage induced within the fluid is measured by two diametrically opposed internally mounted electrodes. The induced signal voltage is proportional to the product of the magnetic flux density, the distance between the electrodes and the average flow velocity of the fluid.

ELECTRODES

When looking from the end of the meter into the inside bore, the two measuring electrodes are positioned at three o'clock and nine o'clock. As a conductive fluid flows through the magnetic field, a voltage is induced across the electrodes. This voltage is proportional to the average flow velocity of the fluid and is measured by the two electrodes. This induced voltage is then amplified and processed digitally by the converter to produce an accurate analog or digital signal. The signal can then be used to indicate flow rate and totalization or to communicate to remote sensors and controllers.

M4000 meters also have an "empty pipe" detection feature. This is accomplished with a third electrode positioned in the meter between twelve o'clock and one o'clock. If this electrode is not covered by fluid for minimum of five seconds, the meter will display an "empty pipe" condition. When the electrode again becomes covered with fluid, the error message will disappear and the meter will continue measuring.

DETECTOR

The flow meter is a stainless steel tube lined with a non-conductive material. Outside the tube, two DC-powered electromagnetic coils are positioned opposing each other. Perpendicular to these coils, two electrodes are inserted into the flow tube. Energized coils create a magnetic field across the whole diameter of the pipe. With no moving parts and open-flow design, there is no pressure lost and practically no maintenance required.

APPLICATION

The M4000 meter is suited for use in applications where indication of rate and totalization is required. The ability to display flow parameters locally at the flow meter, or remotely by mounting the amplifier up to 100 feet away from the detector, provides a versatile solution for most industrial and municipal flow applications. Whether the fluid is water or something highly corrosive, very viscous, contains a moderate amount of solids, or requires special handling, the meter is able to accurately measure it. Housed in a Class 1, Division 1, NEMA 4X (IP66) enclosure, the M4000 design has been tested and approved by Factory Mutual (FM) in the United States and the Canadian Standards Association (CSA international) in Canada.

FEATURES

- Sizes 1/4...12 in. (6...300 mm)
- Accuracy of ± 0.20%
- Better than 0.1% repeatability
- · Digital Signal Processor (DSP) based
- Automatic zero point stability
- No pressure loss for low operational costs
- Long life, corrosion-resistant liners
- Precise calibration
- Digital and analog outputs
- Detector or remote wall mount
- NEMA 4X (IP66) enclosure
- FM approved for Class I, Div 1 hazardous locations
- CE and FCC compliant
- CSA Certified

SPECIFICATIONS

Sizes								
	1/412 in. (6300 mm)							
Flow Range	0.139.4 ft/s (0.0312 m/s)							
Accuracy	± 0.20% of rate ± 1 mm/s							
Repeatability	0.1% of rate							
Power Supply	85240V AC, 4565 Hz; 24V DC							
	010 mA, 020 mA, 420 mA (programmable and scalable),							
Analog Outputs	Voltage sourced (18V DC) – isolated,							
	max. loop resistance = 750Ω							
Digital Outputs	(2) Open collector, (programmable scaled pulse, flow alarm, status, or frequency output), max. 24V DC, 0.5 W (2) AC solid-state relay (programmable flow alarm or status), max. 24V DC @ 0.5 A							
Frequency Output	Open collector, max. full scale flow = 10 kHz							
Communication	RS232C serial, standard ANSI terminal compatible data stream							
Pulse Width	Open collector, 5 ms to 1 second (programmable) or automatic 50% duty cycle							
Min-Max Flow Alarm	Open collector or solid-state relay (programmable 0100% of flow)							
Empty Pipe Detection	Field tunable for optimum performance based on specific application							
Excitation Frequency	Programmable 3.75 Hz, 7.5 Hz or 15 Hz							
Auxiliary Input	Max. 24V DC (programmable positive zero return, external totalizer reset or preset batch start)							
Power Consumption	20 W							
Noise Dampening								
Low Flow Cutoff	130 seconds (programmable)							
	0100% of full scale (programmable)							
Zero-Point Stability	Automatic correction							
Galvanic Separation	500V							
Fluid Conductivity	Min. 5 μS/cm (Min. 20 μS/cm for demineralized water)							
	With remote mounted	PFA & PTFE: – 4248° F (–20120° C) @ max. ambient temp. of 122° F (50° C)						
Fluid Temperature	amplifier	Hard rubber: 32178° F (080°C) @ max. ambient temp. of 122° F (50° C)						
Train remperature	With meter mounted amplifier	PFA & PTFE: – 4212° F (–20100° C) @ max. ambient temp. of 122° F (50° C) Hard rubber: 32178° F (080° C) @ max. ambient temp. of 122° F (50° C)						
Ambient Temperature	- 4122° F (-2050°C)	, , ,						
Altitude	Maximum 6500 ft (2000 m)							
Flow Direction	Uni-directional or Bi-directional							
Totalization		0 digits (programmable forward reverse and net)						
Units of Measure	3 separate displayable totalizers, 10 digits (programmable forward, reverse and net) U.S. gallons, imperial gallons, million gallons per day, cubic feet, cubic meters, liters, oil barrels, pounds, ounces, acre feet							
Ollits of Measure	4 lines x 16 character alphanumeric, backlight; actively displays 3 totalizer values, flow rate, alarm status, output status,							
LCD Display	error / diagnostic messages	ic, backlight, actively displays 3 totalizer values, now rate, alarm status, output status,						
Programming	Internal 3-button or external magi	netic wand						
Field Wiring Entry Ports	TIST 1/2 ID INFT INTERNAL THREAD	Telle Walla						
Field Wiring Entry Ports	(3) 1/2 in. NPT, internal thread Amplifier enclosure and remote in
