

Thermo Scientific Model 42i-HL

High Level NO-NO₂-NO_x

Chemiluminescent gas analyzer for the measurement of nitric oxide, nitrogen dioxide and nitrogen oxide

The Thermo Scientific™ Model 42i-HL High Level NO, NO₂, NO_x Analyzer utilizes chemiluminescence technology to measure the amount of nitrogen oxides in the air from 10 ppm up to 5000 ppm. The Model 42i-HL analyzer is a single chamber, single photomultiplier tube design that cycles between the NO and NO_x modes.

- Ethernet connectivity for efficient remote access
- Enhanced user interface with one button programming and large display screen
- Flash memory for increased data storage and user downloadable software
- Enhanced electronics design optimizes product commonality
- Improved layout for easier accessibility to components

The Thermo Scientific Model 42i-HL analyzer has independent outputs for NO, NO₂, and NO_x and each can be calibrated separately. Dual range and auto range are standard features as well. If required, the instrument can be operated continuously in either the NO or NO_x modes allowing for response times of less than 5 seconds.

Temperature and pressure correction are standard offerings of the Model 42i-HL analyzer. User-settable alarm levels for concentration and for a wide variety of internal diagnostics are available from an easy to follow menu structure.

This state-of-the-art gas analyzer offers features such as an Ethernet port as well as flash memory for increased data storage.

Ethernet connectivity provides efficient remote access, allowing the user to download measurement information directly from the instrument without having to be on-site.

Easily programmable short cut keys allow you to jump directly to frequently accessed functions, menus or screens. The larger interface screen can display up to five lines of measurement information.
